

Compounds of Transitional elements

241. Bell metal is an alloy of
(a) Cu , Zn and Sn
(b) Cu , Zn and Ni
(c) Cu and Zn
(d) Cu and Sn
242. Turnbull's blue is
(a) Ferricyanide
(b) Ferrous ferricyanide
(c) Ferrous cyanide
(d) Ferri-ferricyanide
243. Addition of high proportions of manganese makes steel useful in making rails of rail-roads because manganese
(a) Gives hardness to steel
(b) Helps the formation of oxides of iron
(c) Can remove oxygen and sulphur
(d) Can show highest oxidation state of + 7
244. Copper displaces which of the metal from their salt solutions
(a) $AgNO_3$ (b) $ZnSO_4$
(c) $FeSO_4$
(d) All of these
245. Which of the following statement(s) is(are) correct with reference to the ferrous and ferric ions
(a) Fe^{3+} gives brown colour with potassium ferricyanide
(b) Fe^{2+} gives blue precipitate with potassium ferricyanide
(c) Fe^{3+} gives red colour with potassium thiocyanate
(d) Fe^{2+} gives brown colour with ammonium thiocyanate
246. Which of the following element constitutes a major impurity in pig iron
(a) Silicon (b) Oxygen
(c) Sulphur (d) Graphite
247. Annealing is
(a) Heating steel in nitrogen and cooling
(b) Heating steel to bright redness and then cooling slowly
(c) Heating wrought iron with carbon to redness
(d) Heating steel to high temperature and cooling suddenly by plunging in water
248. In electroplating, the metal that is not used for plating is
(a) Fe (b) Zn
(c) Ni (d) Au
249. Which one of the following is a wrong statement about cast iron
(a) It is also called pig iron
(b) It contains about 4.5% carbon
(c) It is corrosion resistant
(d) It contracts on cooling

250. Iron pipes lying under acidic soil are often attached to blocks of magnesium for protection from rusting. Magnesium offers protection to iron against corrosion because it
- Is more readily converted into positive ions
 - Is lighter than iron
 - Forms a corrosion-resistant alloy with iron
 - Prevents air from reaching the surface of iron
251. FeS_2 is
- Artificial silver
 - Fool's gold
 - Mohr's salt
 - Cast iron
252. Stainless steel is an alloy of iron with
- 8% Cr, 50% Mn
 - 10% Ni, 2% Mn
 - 2% Cr, 3% C
 - 12% Cr, 1% N
253. The chemical processes in the production of steel from haematite ore involve
- Reduction
 - Oxidation
 - Reduction followed by oxidation
 - Oxidation followed by reduction
254. The protection of steel by chrome plating is due to
- Cathodic protection
 - Anodic protection
 - Covering of steel surface
 - Formation of alloy with iron
255. The most convenient method to protect bottom of ship made of iron is
- White tin plating
 - Coating with red lead oxide
 - Connecting with 'Pb' block
 - Connecting with 'Mg' block
256. Carbon monoxide reacts with iron to form
- $Fe(CO)_5$
 - $FeCO_2$
 - $FeO + C$
 - $Fe_2O_3 + C$
257. Iron is extracted from magnetite by reduction with
- H_2
 - C
 - Mg
 - Al
258. Malachite is a mineral of
- Zn
 - Fe
 - Hg
 - Cu
259. The most important oxidation state of copper is
- + 1
 - + 2
 - + 3
 - + 4
260. Hot and conc. nitric acid when reacts with copper, the gas obtained is
- N_2
 - Nitrous oxide
 - NO
 - NO_2
- 261.
